Cam Plastometer Operation Manual Including Theory and Design M. J.

Stewart 1974 "A Cam Plastometer is a compression testing machine used in
studying the hot-working behaviour of metals. The deformation of cylindrical
specimens is controlled by a shaped cam which maintains the true strain rate
constant throughout the hot-working test. This report describes the recently
completed Cam Plastometer at the Mines Branch, Ottawa, Canada. The

theory of design and the operating procedures are also discussed. Tests can be conducted at constant strain rates between 0.1 and 160 per sec. The maximum load is 0.45 MN (100,000 lb) and the maximum test temperature is 1300° C"--Abstract, page i.
