Radar Instruction Manual United States. Maritime Administration 2005 Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. The Literary and Linguistic Construction of Obsessive-Compulsive Disorder Patricia Friedrich 2015-09-15 What does it mean to live with obsessive-compulsive disorder in a time when the word "obsession" has become synonymous with "driven", "focused" or "infatuated"? This book presents a literary and linguistic reading of obsessive-compulsive disorder, both in its contemporary form and its historical antecedent, to argue that medical understandings of disability need their social, political, literary and linguistic counterparts, especially if we aspire to create a more inclusive society. The chapters visit memoirs, historical texts, novels and movies to demonstrate how each of these manifestations becomes a part of the "story" of OCD. In that sense, we construct reality based on the discourses that are available to us, and the discourses of OCD are yet to encompass all of its diversity and complexity.

Culinary Turn Nicolaj van der Meulen 2017-04-30 Kitchen, cooking, nutrition, and eating have become omnipresent cultural topics. They stand at the center of design, gastronomy, nutrition science, and agriculture. Artists have appropriated cooking as an aesthetic practice - in turn, cooks are adapting the staging practices that go with an artistic self-image. This development is accompanied by crisis of eating behaviour and a philosophy of cooking as a speculative cultural technique. This volume investigates the dimensions of a new culinary turn, combining for the very first time contributions from the theory and practice of cooking.

The Persistence of Technology Stefan Krebs 2021-09-30 Repair, reuse and disposal are closely interlinked phenomena related to the service lives and persistence of technologies. When technical artefacts become old and worn out, decisions have to be taken: is it necessary, worthwhile or even possible to maintain and repair, reuse or dismantle them - or must they be discarded? These decisions depend on factors such as the availability of second-hand markets, repair infrastructures and dismantling or disposal facilities. In telling the stories of China's power grid, Canadian telephones, German automobiles and India's shipbreaking business, among others, the contributions in this volume highlight the persistence of technologies and show that maintenance and repair are not obsolete in modern industries and consumer societies.

[Motherhood, Mental Illness and Recovery](#) Nikole Benders-Hadi 2014-08-01 Despite the importance of regaining social roles during recovery from mental illness, the intersection between motherhood and serious mental illness is often overlooked. This book aims to rectify that neglect. A series of introductory chapters describing current research and services available to mothers with serious mental illness are followed by personal accounts of clients reflecting on their parenting experiences. One goal of the book is to provide clinicians with information that they can use to help patients struggling with questions and barriers in their attempts to parent. The inclusion of personal accounts of mothers on issues such as stigma, fears and discrimination in the context of parenting with a mental illness is intended to promote the message of mental illness recovery to a larger audience as well. Finally, it is hoped that this handbook will help inspire more research on mothers with mental illness and the creation of more services tailored to their needs.

[Vacuum in the Dark](#) Jen Beagin 2020-01-28 From the Whiting Award-winning author of Pretend I'm Dead and one of the most exhilarating new voices in fiction, a “thoroughly delightfully, surprisingly profound” (Entertainment Weekly) one-of-a-kind novel about a cleaning lady named Mona and her struggles to move forward in life. Soon to be an FX television show starring Lola Kirke. Mona is twenty-six and cleans houses for a living in Taos, New Mexico. She moved there mostly because of a bad boyfriend—a junkie named Mr. Disgusting, long story—and her efforts to restart her life since haven't exactly gone as planned. For one thing, she's got another bad boyfriend. This one she calls Dark, and he happens to be married to one of Mona's clients. He also might be a little unstable. Dark and his wife aren't the only complicated clients on Mona's roster, either. There's also the Hungarian artist couple who—with her addiction to painkillers and his lingering stares—reminds Mona of troubling aspects of her childhood, and some of the underlying reasons her life had to be restarted in the first place. As she tries to get over the heartache of her affair and the older pains of her youth, Mona winds up on an eccentric, moving journey of self-discovery that takes her back to her beginnings where she attempts to unlock the key to having a sense of home in the future. The only problems are Dark and her past. Neither is so easy to get rid of. Jen Beagin's Vacuum in the Dark is an unforgettable, astonishing read, “by turns nutty and forlorn...Brash, deadpan, and achingly troubled” (O, The Oprah Magazine). Beagin is “a wonderfully funny writer who also happens to tackle serious subjects” (NPR).

[The World's Greatest Brands](#) Nick Kochan 1996-11-11 The magic of brands is as old as Coke and as young as Tango. But getting beneath the packaging to understand a brand's winning technique is tough. Why do Kellogg's or Barbie still remain the consumer's friend? Why should a computer name or a sporting logo win favour with consumers worldwide? The World's Greatest Brands asks such key questions of over 350 of the world's leading brands. Explanations of a brand's history, its management and exploitation will appeal to the expert and the consumer. Anecdotes and analysis are combined to explain the science and art that have contributed to great branding case histories. Also included here is branding consultancy Interbrand's ranking of the world's 100 most powerful brands along with their assessment of brand owners' skills and winning techniques. This is a unique compilation on a subject with a fascination for all consumers. No-one who enjoys the benefits of great brands can fail to enjoy and profit from this book.

[New Trends in Macromolecular and Supramolecular Chemistry for Biological Applications](#) Marc J.M. Abadie 2022-05-29 This contributed volume applies the insights of supramolecular chemistry to biomedical applications such as ions/water transport through nano-scale channels, gene therapy, tissue engineering and drug delivery, to cite some of the major investigations. The challenge is to understand the mechanisms of transport through tissues particularly in the therapeutic treatment of a disease where the active drug must be delivered directly to diseased cells without affecting healthy cells. As a result, smaller quantities of active substances can be used to treat the disease. Another interest concerns new ways to administer gene therapy. If genes are often delivered to their target cells by adapted viruses, the supramolecular non-viral 'vectors' using dynamic nano-frameworks and nano-structures are presented. In addition, it is important to reconstruct damaged tissues by mimicking natural processes in cells and polymers, such as tissue engineering and self-healing. Different options are here discussed: e.g. hydrogels based on chitosan, a carbohydrate polymer, are proving especially promising for tissue engineering and drug delivery. For controlled delivery of drugs or other biologically active compounds, hydrogels sensitive to the most important stimuli in the human body, such as temperature, pH, ionic strength, glucose and biomolecules released by the organism in pathological conditions have been developed. Finally, to assist and validate the experimental studies, computer modelling and simulations of large-sized molecular structures and systems using different molecular dynamics and quantum mechanical techniques are developed based on the experimental and chemistry synthesis. This book is of great interest for graduate students, researchers and health professionals interested in acquiring a better understanding of the mechanisms of medical treatments. In addition, it provides numerous tools to develop better therapies for human diseases.

[Learn Better](#) Ulrich Boser 2017-03-07 For centuries, experts have argued that learning was about memorizing information: You're supposed to study facts, dates, and details; burn them into your memory; and then apply that knowledge at opportune times. But this approach to learning isn't nearly enough for the world that we live in today, and in Learn Better journalist and education researcher Ulrich Boser demonstrates that how we learn can matter just as much as what we learn. In this brilliantly researched book, Boser maps out the new science of learning, showing how simple techniques like comprehension check-ins and making material personally relatable can help people gain expertise in dramatically better ways. He covers six key steps to help you “learn how to learn,” all illuminated with fascinating stories like how Jackson Pollock developed his unique painting style and why an ancient Japanese counting device allows kids to do math at superhuman speeds. Boser's witty, engaging writing makes this book feel like a guilty pleasure, not homework. Learn Better will revolutionize the way students and society alike approach learning and makes the case that being smart is not an innate ability—learning is a skill everyone can master. With Boser as your guide, you will be able to fully capitalize on your brain's remarkable ability to gain new skills and open up a whole new world of possibilities.

[Organizing for Sustainability](#) Jan Jonker 2021 This upper-level Open Access textbook aims to educate students and professionals on how to develop business models that have a positive impact on people, society, and the social and ecological environment. It explores a different view of how to organize value creation, from a focus on an almost exclusively monetary value creation to one that creates positive impact through multiple values. The book offers students and entrepreneurs a structured approach based through the Business Model Template (BMT). It consists of three stages and ten building blocks to facilitate the development of a business model. Users, be they students or practitioners, need to choose from one of the three offered business model archetypes, namely the platform, community, or circular business models. Each archetype offers a dedicated logic for value creation. The book can be used to develop a business model from scratch (turning an idea into a working prototype) or to transform an existing business model into one of the three archetypes. Throughout the book extra sources, links to relevant online video clips, assignments and literature are offered to facilitate the development process. This book will be of interest to students studying the development of business models, sustainable management, innovation, and value creation. It will also be of interest executives, and professionals such as consultants or social entrepreneurs seeking further education.--

Phenolic Resins: A Century of Progress Louis Pilato 2010-03-10 The legacy of Leo Hendrik Baekeland and his development of phenol formaldehyde resins are recognized as the cornerstone of the Plastics Industry in the early twentieth century, and phenolic resins continue to flourish after a century of robust growth. On July 13, 1907, Baekeland filed his "heat and pressure" patent related to the processing of phenol formaldehyde resins and identified their unique utility in a plethora of applications. The year 2010 marks the Centennial Year of the production of phenolic resins by Leo Baekeland. In 1910, Baekeland formed Bakelite GmbH and launched the manufacture of phenolic resins in Erkner in May 1910. In October 1910, General Bakelite began producing resins in Perth Amboy, New Jersey. Lastly, Baekeland collaborated with Dr. Takamine to manufacture phenolic resins in Japan in 1911. These events were instrumental in establishing the Plastics Industry and in tracing the identity to the brilliance of Dr. Leo Baekeland. Phenolic resins remain as a versatile resin system featuring either a stable, thermoplastic novolak composition that cures with a latent source of formaldehyde (hexa) or a heat reactive and perishable resole composition that cures thermally or under acidic or special basic conditions. Phenolic resins are a very large volume resin system with a worldwide volume in excess of 5 million tons/year, and its growth is related to the gross national product (GNP) growth rate globally.
